

# DriveRescue

**Professional Data Recovery**

Baltimore Metro area: 410-698-1241

Washington DC Metro: 240-483-4294

**FACT:** Amateur data “recoveries” are the Number One Killer of sick hard drives. Just as with a heart attack or stroke, you have a limited time to act once your drive fails or is diagnosed as failing. The more fiddling with the drive, the less likely it will be recoverable – *is that really a cost benefit?*

**DriveRescue** is a professional, Baltimore-based data recovery company, serving people across the Mid-atlantic and around the world. If you live and work within our coverage area, we offer pickup and delivery. You can also choose to ship your hard drive, or bring it to one of our affiliates who will forward it to us. Apple Macintosh recoveries a speciality.

**Why wait?** We know you can’t afford to be out of business. Let us get moving on your data recovery right away. Fast turn-arounds available at reasonable rates.

**Why take a chance with your confidentiality?** DriveRescue leads in discrete data recovery and restoration. We will bring back your data, if it can be recovered, and do it confidentially. Every time.

## You’re Making the Right Choice.

*When bad things happen, smart people turn to professionals for help.*

Some things we can do ourselves, while others are best left to those with the training and experience. Anyone who has ever attempted to shave a cat or prepare for an IRS audit knows what we mean.

We are Mac people. We know Macs, and we understand how important they are to their owners. We think you want your Mac to be recovered by people who actually know and understand Macs. Call us or email “[service@driverescue.net](mailto:service@driverescue.net)”

**DriveRescue**  
means data recovery  
*for Mac people, by Mac people.™*
